Typesetting Q&A-style conversation mad JINW

# / 1 / Introduction

Corresponding to: Q-and-A 2023/11/09.

pure text Q&A dialog like this:

What is `...`?

[Feature A]

[Feature B] It also ...

> [\*] \*emphasized\* [\*] \*\*bold\*\*

[\*Aspect one] Firstly, ... [\*Aspect two] Secondly, ...

Can you provide some examples for `...`?

[\*] \*\*\*bold and emphasized\*\*\*

Q1: What is ...?

1. Feature A:

 emphasized bold

2. Feature B: It also ...

bold and emphasized

You should make sure that this document class is properly installed.

should already be included, and you don't need to do anything.

Of course. A typical document looks like this:

\documentclass[%11pt, use theme =  $\langle theme \rangle$ , numbered question, numbered answer,

scroll,  $]{Q-and-A}$ 

\begin{document}

\end{document}

to break normally.

yet -

What about the main content?

several syntaxes. Let me explain.

1. Questions (Q), Answers (A), and Narrations (N): • A question begins with the prefix Q: or ?. An answer begins with the prefix A: or :. • A narration begins with the prefix N: or ".

The available class options include:

Font size options such as | 11pt |, | 12pt |.

latex

into a carefully designed document like this:

`...` is a `...`. It has the following features:

Certainly. There are many types of `...`, for example:

A1: A ... is a .... It has the following features:

 Aspect one: Firstly, ... Aspect two: Secondly, ...

Q2: Can you provide some examples for ...?

A2: Certainly. There are many types of ..., for example:

/2/ Preparation

If you are using TeX Live 2024 or newer, or the most recent version of MikTeX, then this package

Otherwise, you need to check for package update to see if you can receive it. In case not, you can

/ 3 / Usage

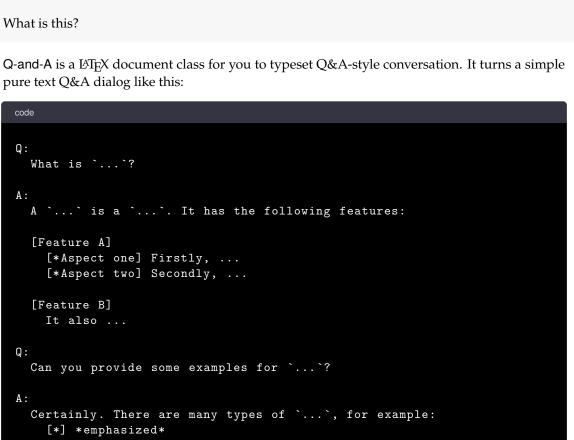

always go to the CTAN page to download the .zip file with all related files included.

\UseLanguage {\language\} % For English this line can be omitted.

What is this?

code

# November 2023,

- That is nice. How can I use it? Is there anything that needs to be prepared?
- Now that I have successfully installed it, could you propose an example of usage?

  - scroll: turn the scroll mode on, which generates a single-page pdf similar to a long screenshot. It is recommended to use this option if your document contains some large piece of code. • use theme = (theme): use the selected theme, available choices include: default (like the current document), ChatGPT-light and ChatGPT-dark (see the demo documents). numbered question, or question number: enable the numbering of questions. numbered answer, or answer number: enable the numbering of answers. answer outside the box, or answer out of the box (or even omit the): enable another implementation for printing the answer that does not involve putting it into a colored box. This would be useful if the answers contain many long pieces of code while you still want the pages
    - Note that this depends on the current language. The prefixes ?, : and " being universal, • for French, it is Q&R&N, thus the alphabetical prefixes become Q: , R: and N:; • for German, it is F&A&E, thus the alphabetical prefixes become F: , A: and E: ; for Italian, it is D&R&N, thus the alphabetical prefixes become D: , R: and N:; • for Portuguese and Brazilian, it is P&R&N, thus the alphabetical prefixes become P: , R:

You have already seen an example of the main content. As you might have noticed, there are

• for Russian, it is B&O&P, thus the alphabetical prefixes become B: , D: and P: ; • for Spanish, it is P&R&N, thus the alphabetical prefixes become P:, R: and N:;

answers, and 注: for narrations; similarly for traditional Chinese;

• for simplified Chinese, it is also possible to use the prefix 问: for questions, 答: for

• for Chinese or Japanese, it is also possible to use the prefix ? for questions, : for answers,

An emphasized itemize is marked by [\*\langle text\rangle], where \langle text\rangle is the text to be empha-

When \(\langle \text() \) is empty, you get the usual appearance of enumerate or itemize. With this method of writing, each emphasized enumerate and itemize must be put into a separate paragraph, and the lists cannot be nested. The usual enumerate and itemize

 Emphasized version: An emphasized enumerate is marked by [(text)] at the beginning, where (text) is the text to be emphasized. The numbering is reset at the end of each answer. If you wish to restart the numbering from 1, write an asterisk after the final bracket:

and ", " or \ for narrations.

• Use \*\*(*text*)\*\* to make (*text*) into boldface. • Use \*\*\*(*text*)\*\*\* to combine the previous effects.

• Use \*\(\text\)\* to emphasis \(\lambda text\rangle\).

2. Emphasize and Bold:

3. Enumerate and Itemize:

sized. Normal version:

of parentheses around it.

be written as \%, etc.

7. Input/Include Files:

 $| | <\langle width \rangle > {\langle mage file name \rangle}$  or  $| | {\langle mage file name \rangle} <\langle width \rangle > : display in the center.$ • ((  $\langle width \rangle \rangle$  { $\langle image\ file\ name \rangle$ } or (( { $\langle image\ file\ name \rangle$ }  $\langle width \rangle \rangle$ : display on the left. • )) <\(width\)> {\(\lambda\) image file name\)} or )) {\(\lambda\) image file name\)} <\(\width\)> : display on the right. The \(\lambda u \) is optional. Here, \(\lambda u \) is a number like 0.75, the unit is \(\lambda\) inewidth. When

(width) is not given, the width would be full \linewidth.

environments would still be useful if you need nested lists.

4. **Images:** Displayed images can be included via one of the following ways:

• For centered image, the caption can be written via >> \(\caption \text\).

cannot directly insert source code in your document. There are some workarounds, though. For inline code, you may simply write it between two backticks \`\( \cdot \cdot \cdot \cdot \), similar to the Markdown syntax. However, be aware that special characters need to be escaped, for example, \ should be written as \textbackslash, \ should be written as \\ \ \ % should

• For displayed code, stored the code into a separate file, and then use == {\file name\}\ to

Currently, the *(caption text)* shall be directly printed in the center. You may wish to add a pair

5. Code: Due to the current implementation of this document class, it is unfortunate that you

print it. You may also use an optional argument like == [(language)] {(file name)} to select the language of your code. If the answers contain many long pieces of code, you may consider using the class option answer outside the box.

• If you wish to use the *numbered* version, write ##+, ###+ and ####+ instead.

And don't forget that you are still using LATEX, so images, tables and lists can be written as usual. Currently, the default style for showing tables has not been settled (since the color configuration for tables with or without headers would be slightly different). As a temporary solution, it

> / 4 / Cautions

• For emphasizing and bolding the text, it would be necessary to separate the asterisks with {}

• Due to the recognition of the syntax, you cannot directly use characters like \* as usual, especially in math mode. You should consider using an alternative macro, such as \ast for \* in math mode, or define a command version of the character in the preamble, such as

- 6. **Sections:**  You may start a new (unnumbered) — - section, via ## {\(\langle\) section title\(\rangle\)};
  - is recommended for you to consult the several nice answers of this question: https://tex. stackexchange.com/q/10224.

• Use :: {\langle file name \rangle} to input a file. • Use ::: {\( file name \) } to include a file.

− subsection, via ### {⟨subsection title⟩};

− subsubsection, via #### {⟨subsubsection title⟩};

• A question, answer or narration should always begin in a new paragraph. · An emphasized enumerate should also begin in a new paragraph. An emphasized itemize should usually begin in a new paragraph, with the exception that it can (partially) be used within an enumerate. • Likewise, a section / subsection / subsubsection should be placed in a separate paragraph. Input or inclusion of files should also be operated in a separate paragraph.

\textasterisk for \*; - \textbacktick for `; - \textcolon for :; - \textequalsign for =; - \textleftparen for (; - \textrightparen for ); - \textsharp for #. - \textvert for |.

interface to suit my preferences, for instance?

labels for each role in the conversation.

your document.

Q: I see. Is there anything else for me to be careful about?

A: Glad that you asked. Here are several things that should be taken care of:

in some special cases: \*\*like\*\*{}\*\*\*this\*\*\*{}\*one\*.

\textasterisk for \*. A list of predefined commands are:

There are also a few that already provided by LATEX, such as:

/5/ Customization

Certainly. Apart from using themes via class option, you may also change the identifiers and the

1. Changing itentifiers: Instead of the default identifiers, such as ? for questions, you may also use your preferred one. This can be done via the use of \QASetTypePrefix in the preamble of

• Use \QASetTypePrefix{Q}{\(\lambda\) identifiers\\} to set the identifiers for questions. • Use  $\mathbb{QASetTypePrefix\{A\}}{(\textit{identifiers})\}}$  to set the identifiers for answers. • Use \QASetTypePrefix{N}{(identifiers)} to set the identifiers for narrations.

for narrations is preset via  $\QASetTypePrefix\{N\}\{N:,", ",", "\}$ .

• Use \SetLogoCode{Q}{\langle (logo code \rangle)} to set the labels for questions. • Use \SetLogoCode{A}{\langle logo code \rangle} to set the labels for answers.

 $\AddLanguageSetting[\langle language name \rangle] \{\langle settings \rangle\}$ 

logo for each role in the conversation.

Q: Is there any known issue with this document class?

effort to make it work with the current document class.

within the text (alternative solution has been proposed above).

be reset, this might cause some confusion in certain cases.

\QAShowCounter:

when setting them.

lead to issues with the list labels.

Q: Now that we have learned the basic usage, I would like to know more. Can I customize the

wish to use an identifier that contains a comma, you may use \QAAddTypePrefix instead, which only adds *one* identifier per use. Note also that, the identifiers are reset upon changing of language. Thus, you need to put your setting into the corresponding language configuration, for example, via

2. Changing labels: You may also change the labels. For example, from the text "Q:" to a logo icon. This can be done via the use of \SetLogoCode in the preamble of your document.

Here, (logo code) is the actual code for displaying the corresponding label. For example, the default label for (unnumbered) questions is preset via \SetLogoCode{Q}{\textbf{Q\,:}}. In the demo document, you can find an example on how to use this command to specify a

If you wish to include the question number or answer number, you may use the command

/6/ **Known Issues** 

Note that, due to its implementation, the identifier cannot contain comma, in it. If you

Here, (identifier) is a comma list of your specified identifiers. For example, the default identifier

- Use \QAShowCounter{Q} to step the counter of question and print it. • Use \QAShowCounter{A} to step the counter of answer and print it. For example, the default label for numbered questions is preset by adding \QAShowCounter{Q} to the unnumbered version:  $\ensuremath{\lower10}\cline{Q}{\text{QAShowCounter}}.$
- A: Unfortunately, yes : (. Below is a list of known issues: • Currently, the code highlight is done by the package listings. Due to its own limitations,

the result is still far from satisfactory. Using minted instead could improve the situation, but this would require -shell-escape and some external tweaking, thus it would still take some

Due to the current implementation, one cannot direct write code (either inline or displayed)

 Due to the current implementation, the method for inputting and including subfiles doesn't really work like \input and \include. In particular, the current type of conversation would

 Due to the current implementation, though it is already possible to automatically adopt the identifiers and labels for supported languages, you still need to use the identifiers Q, A and N

· Currently, for typesetting questions and answers, the text is in fact being put into some sort of description list (upon reflection, why did I do this? I could have simply put the label into margin...). As a result, the level of lists might be slightly messed up, which could sometimes

- Due to the current implementation, when displaying the code, one may not be able to write some of the language name like C# directly, but has to write an alternative name such as Due to the current implementation, one may not be able to directly write certain characters (such as \*) in the text, this might be especially inconvenient in math mode (temporary alternative solution has been proposed above).
